

What is VR?

The initials “VR” stand for Vibration Reduced.

In many parts of the world there is a growing demand for a reduction in the levels of vibration associated with conventional tools, especially where the operator is exposed to regular or continuous use.

Macdonald’s “VR” range of tools is leading the way in achieving significantly reduced vibration levels while at the same time maintaining performance and controllability.

All Macdonald “VR” products have been independently tested and approved by OPERC . www.OPERC.com
